

# National Board Certification Standards Roadmap

2

## EXAMPLES

The standards are full of examples of accomplished teaching. Print out your standards and highlight what you do not already do.

1

## STUDY

All certificate areas have 10-13 standards. Make sure you thoroughly study, know, and understand your [certificate's standards](#). Certification is based on the integration of your standards. The standards also align to the Five Core Propositions of Accomplished Teaching [Accomplished Teacher](#)

3

## IDENTIFY

All [component instructions](#) identify which standards you will focus on for that component. (See page 1 & 2)

4

## MEET

In each component, integrate each identified standard multiple times in multiple ways. Remember to provide clear, consistent and convincing evidence.

6

## ALIGNED

Certificate standards align with the Five Core Propositions. Component rubrics align with the identified standards. The commentary questions align with the component rubric. Look for and study these relationships.

5

## SHOW

Do not simply use the "language of the standards" in your written commentary. SHOW what the standard looks like in action in **your** classroom.

7

## CREATE

Create a Standard Notebook. Purchase a composition notebook. As you read through each standard, outline the standard in your notebook. Refer to your notebook throughout the process.
